DIFF: two interventions on the same destination

(a) → (b): replace task K,V. (c) → (d): replace progress Q. Dashed: transplant. Solid: resulting continuation.

(a) Task / goal transfer

$(K,V)_{dst} \leftarrow (K,V)_{src_kv}$

p_{src_kv} **TASK DONOR**

$G = \{T_1, T_3\}$ $P = \{T_1\}$

Keep words satisfying both conditions:

T_1: the word is a palindrome
T_3: the word has >1 unique characters

```
def func(words: list[str]):
    res = [w for w in words
           if w == w[::-1]]

    return [w for w in res if
```

π: final token of the prompt

Different task set; shared progress $\{T_1\}$

(c) Progress transfer

$q_{dst} \leftarrow q_{src_q}$

p_{src_q} **QUERY DONOR**

$G = \{T_1, T_2\}$ $P = \{T_2\}$

Keep words satisfying both conditions:

T_1: the word is a palindrome
T_2: the word starts with a vowel

```
def func(words: list[str]):
    res = [w for w in words
           if w[0] in "aeiou"]

    return [w for w in res if
```

π: final token of the prompt

Same task set; different progress $\{T_2\}$

Clean run

$M(p_{dst})$

T_2 vowel-initial

```
w[0] in "aeiou"]
```

No patch

p_{dst} **SHARED DESTINATION**

$G = \{T_1, T_2\}$ $P = \{T_1\}$

Keep words satisfying both conditions:

T_1: the word is a palindrome
T_2: the word starts with a vowel

```
def func(words: list[str]):
    res = [w for w in words
           if w == w[::-1]]

    return [w for w in res if
```

(a) (c)

π: final token of the prompt

One destination prompt.
Two separate patched runs.

Effect of (a)

(b) K/V-patched run

$M(p_{dst})$ $[(K,V)_{dst} \leftarrow (K,V)_{src_kv}]$

T_3 >1 unique characters

```
len(set(w)) > 1]
```

Effect of (c)

(d) Query-patched run

$M(p_{dst})$ $[q_{dst} \leftarrow q_{src_q}]$

T_1 palindrome

```
w == w[::-1]]
```

Schematic continuations · Each patch is applied separately to the same p_dst; the destination text is never replaced.

G: task set; P: completed work; π: pivot. Nonempty lowercase words assumed. Arrows identify activation sites; patch settings belong in the caption.
