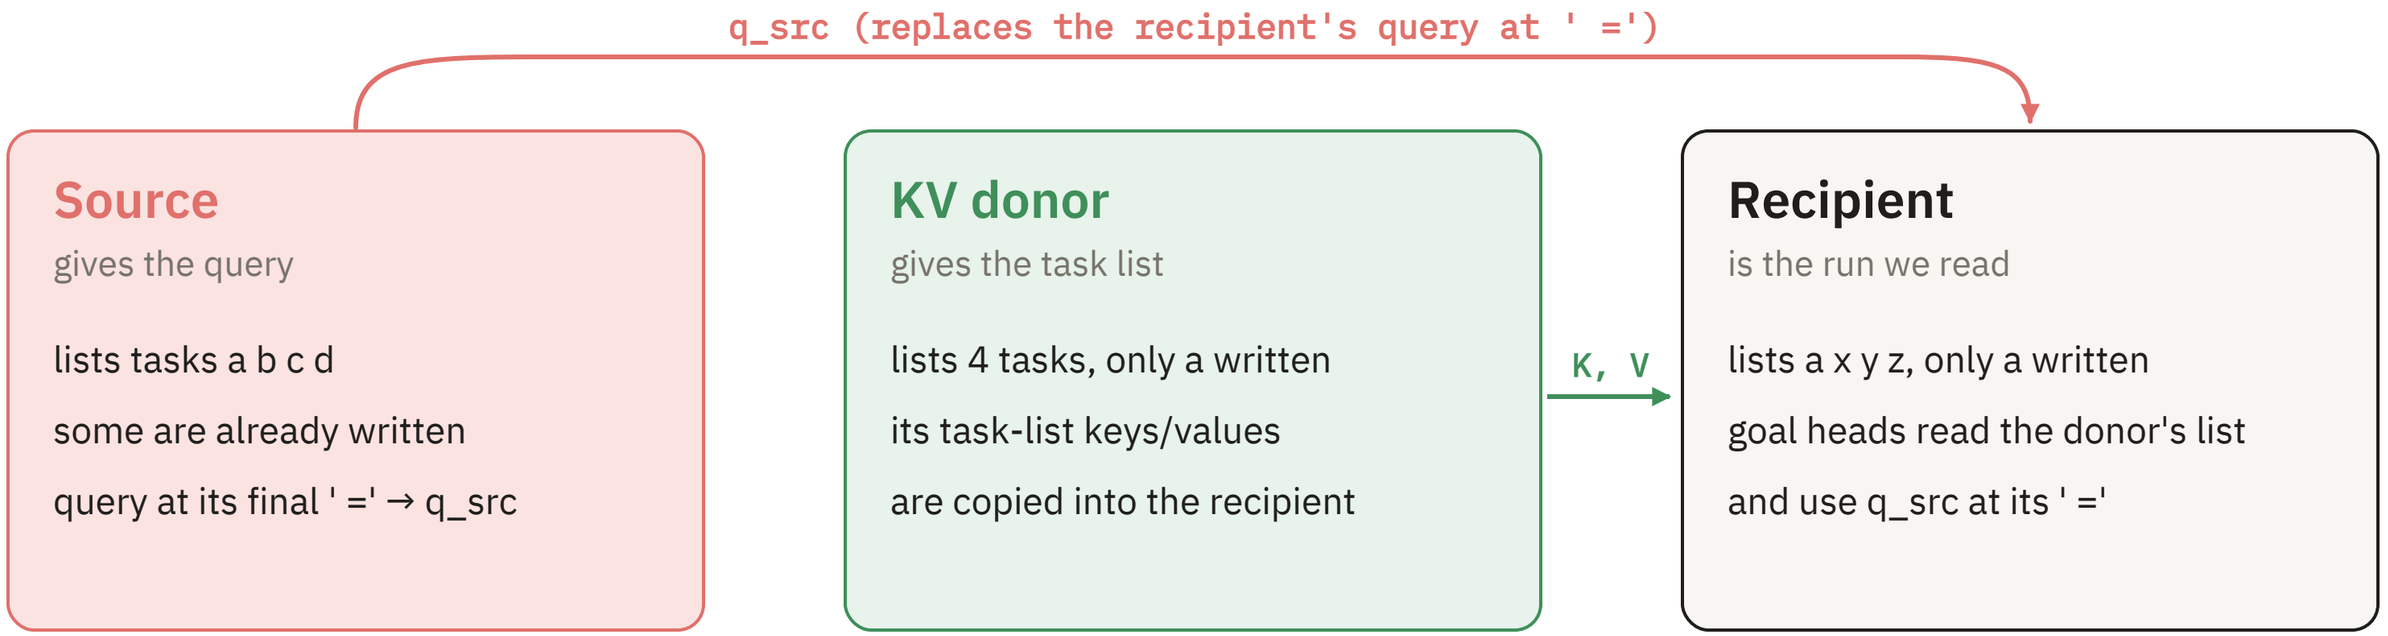
Which donor task does a transferred query select?

three prompts per run · Qwen2.5-Coder-32B · 250 goal heads · read gaze, no generation



Readout: gaze at the recipient's final ' ='

attention × |value| from the pivot to each of the donor's four task descriptions, averaged over the goal heads · the highest-gaze task is the winner

Question: which donor task wins, given what the source has already done?
