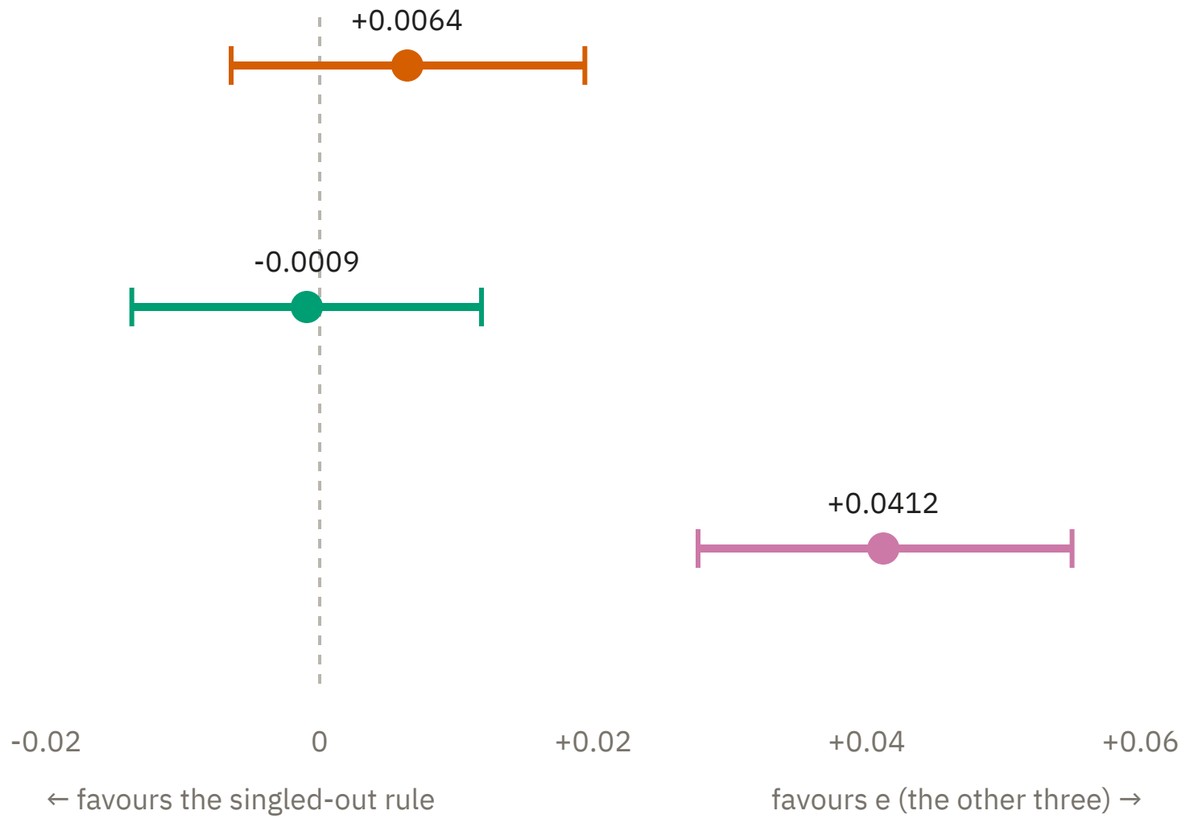
The three tests, pooled over 128 groups

gaze margin between the shared prediction (e) and the singled-out one · mean and 95% bootstrap interval

ALT1: e − d
tests order_id

ALT2: e − f
tests complete_count

ALT3: e − b
tests induction



unresolved
interval spans 0

unresolved
interval spans 0

against induction
interval excludes 0

A positive margin favours e but not set_diff alone: two other rules also predict e in each setup.
